

1.

1	Bi Haleema
1	Drawn
1	Chacha Cricket
1	Take three hands as input, one for each of the players “Allah Rakha”, “Bi Haleema” and “Chacha Cricket”. Output the name of the player with a hand that is different from the other two hands. If all hands are identical, output “Drawn.”
1	Input and output
1	if used AND at least one hand compared to (another hand OR “UP” OR “DOWN”)
1	at least one correct case and output
1	all correct cases and outputs
1	minimal conditionals (ideally “UP” or “DOWN” not used)
1	Show the evaluation of conditionals and the correct branch being chosen.

2.

1	N
1	S
1	N
1	Input four numbers, A, B, C and D. Add the number C, and then D, to either A if A < B, or to B otherwise. Output either "S" if A < B, or "N" otherwise.
1	Input and output
1	def with correct name AND parameter AND function called with argument
1	one addition performed correctly
1	both additions performed correctly
1	correct result returned (NOT printed in function)
1	Show the function call with arguments, and value being returned.

3.

1	$3 \times 1 = 3$ $3 \times 2 = 6$ $3 \times 3 = 9$ $3 \times 4 = 12$
1	$4 \times 1 = 4$ $4 \times 2 = 8$ $4 \times 3 = 12$
1	$8 \times 1 = 8$ $8 \times 2 = 16$ $8 \times 3 = 24$ $8 \times 4 = 32$ $8 \times 5 = 40$
1	Input numbers N and M. Display formatted multiples of N from 1 to M.
1	Input and output
1	for range used OR while used with variable (initialised AND updated)
1	correct range OR correct while condition
1	multiples calculated correctly
1	correct print format
1	Show iterated variable and output.

4.

1	1
1	1 22 22 333 333 333
1	1 22 22 333 333 333 4444 4444 4444 4444 55555 55555 55555 55555 55555
1	Input S. For each size z from 1 to S, print z rows with z copies of z.
1	Input and output
1	(two OR three) nested for-range loops OR while loops with variables (initialised AND updated)
1	correctly indented two nested for loops with string repetition OR three nested for loops OR while loops with correct conditions
1	correct string repetition or printing (z)
1	all output correct
1	Show nested iteration variables and output.

5.

1	No output.
1	No output.
	OR
(1)	(Name) error: "password" is undefined.
(1)	(Name) error: "password" is undefined.
	OR
(1)	Length must be between 8 and 30 letters (exclusive).
(1)	Length must be between 8 and 30 letters (exclusive).
1	Line 01: parameter should be correctly named.
1	Line 02: criterion 1 is met for passwords of length between 8 and 30 inclusive.
1	Line 08: slice only iterates over a substring of the password.
1	Line 23: criterion 5 is met if there is no space in the password.
C1	(Compensatory) No inputs or outputs.
1	Line 01: def password_strength(password):
1	Line 02: if len(password) <= 8 or 30 <= len(password):
1	Line 08: for letter in password:
1	Line 23: elif found_space:
C1	(Compensatory) Line 26: p = input() (Compensatory) AND (Compensatory) Line 27: print(password_strength(p))
