

## **Potential Questions to ask from Doctors:**

1. Could you please tell us about your role and experience in treating or managing rabies cases?
2. What kind of rabies cases are most common here animal bites, delayed treatment, or unawareness of vaccination?
3. How would you explain what rabies is to someone with no medical background?
4. What are the main causes and modes of transmission of rabies?
5. What early symptoms should people look out for after being bitten or scratched by an animal?
6. Is rabies curable once symptoms start appearing?
7. What steps should someone take immediately after a dog or animal bite?
8. Are preventive vaccinations (pre-exposure) recommended for certain people (e.g., veterinarians, animal handlers)?
9. What are the most common myths or misconceptions you've heard from the public about rabies?
10. How can we improve public awareness about rabies prevention and treatment?
11. If we were to create a short awareness skit for the general public, what key messages should it include?
12. Is there anything else you'd like to share that could help us in designing our awareness material or skit?

## **Potential Questions To ask Victims:**

1. Can you describe what happened — how and when did you or your family member get bitten or scratched?
2. Was the animal stray or a pet? Do you know if it was vaccinated?
3. How soon did you decide to go to a hospital or clinic for treatment?
4. If there was a delay, what caused it (e.g., distance, money, advice from others, fear, or lack of awareness)?
5. When you reached the hospital, what treatment did you receive?
6. Before this incident, did you know about rabies and its seriousness?
7. Did you know that rabies can be 100% preventable if treated in time?
8. What message would you like to give to people who might face a similar situation?
9. If we make an awareness skit, what do you think we should show or highlight so that people take rabies seriously?
